

DECEMBER

National Handwashing Awareness Month

Handwashing is one of the best ways to protect yourself and your family from getting sick.

Handwashing is easy to do and it's one of the most effective ways to prevent the spread of many types of infection and illness in all settings—from your home and workplace to child care facilities and hospitals. Clean hands can stop germs from spreading from one person to another and throughout an entire community.

Together we can spread the word and keep our community healthy!!!!

Handwashing is a win for everyone, except the germs.
Clean Hands Save Lives.

When should you wash your hands?

- Before, during, and after preparing food
- Before eating food
- Before and after caring for someone who is sick
- Before and after treating a cut or wound
- After using the toilet
- After changing diapers or cleaning up a child who has used the toilet
- After blowing your nose, coughing, or sneezing
- After touching an animal, animal feed, or animal waste
- After touching garbage
